

Capsule Device Driver Interface Library

June 2021

Capsule's Medical Device Information Platform includes built-in support for hundreds of diverse medical devices from every major manufacturer. New Capsule Device Driver Interfaces (DDIs) are continuously added to support new versions, models and manufacturers.

To request new DDI development, contact sales@capsuletech.com

Capsule provides an extensive list of medical device drivers; however, individual drivers may not work with a specific system environment. Integration, functionality and usability of any individual driver is specific to the version of Capsule solution and the receiving system (EMR, Patient Surveillance, Alarm Management, Asset Management, etc.). Be sure to contact your Capsule sales representative to define the appropriate solution that will fit your environment.
